

## North Carolina Department of Revenue

Lyons Gray Secretary

June 11, 2014

This letter is in response to your letter dated **and the second of**, wherein you requested a private letter ruling from the North Carolina Department of Revenue ("Department") on behalf of your client, **and the second of** ("Taxpayer"), addressing issues related to North Carolina's Renewable Energy Tax Credit under N.C. Gen. Stat. § 105-129.16A(a).

The statement of facts submitted for the Department's consideration of your request is summarized as follows:

The Taxpayer is a limited liability company organized under the liability company will be the sole member of the sole of the s

, an international developer, owner, and operator of solar The Taxpayer is affiliated with photovoltaic projects and plans to expand its solar power generation program through the development of the Project (defined below) in North Carolina. The Taxpayer estimates the Installations will result in private in North Carolina. The Project Company will own a ground-mounted, solar investments of photovoltaic energy facility (the "Project") that will be comprised of independently operational installations (each an "Installation" or collectively, the "Installations"). The Installations will be located in on approximately acres of land near the town of (the "Site"). The underlying real property will be leased to the Project Company for a period of years. All appropriate state and local permit applications and certifications will be obtained by the Project Company. Each Installation will be a clean, sustainable source of energy for the state of North Carolina. All electricity generated at the Site will be sold to under a power purchase agreement.

Each solar photovoltaic Installation will consist of (i) solar panels, (ii) racking, (iii) inverters, (iv) transformers, (v) equipment pads, (vi) switchgear, and (vii) electrical wiring. Each Installation will utilize a

module racking design consisting of fixed-tilt ground mounted systems. Wiring connecting the individual solar panels for each final Installation will be mounted to the underside of the racking system for connection to the combiner boxes. Combiner boxes will collect the multiple strings of wires into a single circuit. Wiring exiting the combiner boxes will be installed below the ground surface and extend to the inverters, which will be used to convert the direct current (DC) electricity produced by the panels to alternating current (AC) electricity. The inverters will be mounted on concrete pads located near each respective Installation. The AC electricity produced by the inverters for each Installation will be increased to distribution level voltage through a co-located transformer at each inverter station. The output of each Installation will be metered independently and then conveyed via an underground electrical collection system to the switchgear equipment.

In addition to combining the electricity produced from each Installation, the switchgear equipment will also incorporate safety disconnects for each independently operated Installation and include protective relaying devices to safely interconnect the Installations from the electrical distribution grid.

## Issues:

- Whether the costs to construct and install up to independently operational solar photovoltaic installations described above will qualify for the State's Renewable Energy Tax Credit under N.C. Gen. Stat. §105-129.16A(a); and
- ii) Whether each solar photovoltaic installation will constitute an "installation of renewable energy property" for purposes of N.C. Gen. Stat. §105-129.16A(c)(1).

## Department's Response:

The costs to construct and install the solar photovoltaic installations described in your statement of facts will qualify for the State's Renewable Energy Tax Credit under N.C. Gen. Stat. §105-129.16A(a), and each solar photovoltaic installation will constitute an "installation of renewable energy property" for purposes of N.C. Gen. Stat. §105-129.16A(c)(1).

Importantly, N.C. Gen. Stat. § 105-129. 15(f) defines "renewable energy property," in part as:

"Solar energy equipment that uses solar radiation as a substitute for traditional energy for water heating, active space heating and cooling, passive heating, daylighting, generating electricity, distillation, desalination, detoxification, or the production of industrial or commercial process heat. The term also includes related devices necessary for collecting, storing, exchanging, conditioning, or converting solar energy to other useful forms of energy."

Since each Installation described above will convert solar radiation into electricity and will consist of the components constituting either (i) solar energy equipment that converts solar radiation into electricity or (ii) devices necessary for collecting, storing, exchanging, conditioning, or converting solar energy, the property described in the statement of facts meets the statutory definition of "renewable energy property." Therefore, the costs to construct and install the solar photovoltaic installations will qualify for the State's Renewable Energy Tax Credit under N.C. Gen. Stat. § 105-129.16A(a).

Under the aforementioned statute, a taxpayer that constructs, purchases, or leases renewable energy property and places such renewable energy property in service in North Carolina during the taxable year is allowed a credit equal to thirty-five percent (35%) of the cost of the property. For renewable energy property other than property that serves a non-business purpose, the entire credit may not be taken for the taxable year in which the property is

June 11, 2014 Page **3** of **3** 

placed in service but must be taken in five equal installments beginning with the taxable year in which the property is placed in service and may not exceed a ceiling of two million, five hundred thousand dollars (\$2,500,000.00) per installation.

N.C. Gen. Stat. § 105-129.15(4b) defines "Installation of renewable energy property" as "Renewable energy property that standing alone or in combination with other machinery, equipment, or real property is able to produce usable energy on its own." Based on our review of information provided, it is our understanding that each individual installation will include several "ground mounted" photovoltaic arrays, as well as system monitoring equipment and a variety of electrical components necessary to deliver AC electricity to the point of interconnection. Each installation of photovoltaic arrays will also be separately connected into the switchgear, which will provide the transmission capacity necessary for the renewable power to feed into the utility company's grid. In the event any one or more of the installations of photovoltaic arrays is turned off, any of the other installed arrays "standing alone" can continue to generate usable energy independently of the other installations and feed it into the grid. Therefore, the Department will treat each Installation as a separate "installation of renewable energy property" for purposes of the \$2.5M ceiling on the amount of the renewable energy credit under N.C. Gen. Stat. § 105-129.16A(c)(1).

Please note, however, that the site-wide project costs allocated to each Installation and the cost of any equipment, such as ground mounting systems, wiring, and disconnect switches, must be necessary and integral to collecting, storing, exchanging and converting solar energy to electrical power in order to qualify for the credit. Upon audit, the taxpayer must furnish records for inspection that provide the costs and purpose of any equipment included in the costs of the renewable property for which the credit is claimed.

This ruling is based solely on the facts submitted to the Department of Revenue for consideration of the transactions described. Your statement of facts and our findings are subject to audit verification. If the facts and circumstances given are not accurate, or if there are other facts that were not disclosed that might cause the Department to reach a different conclusion, then the taxpayer requesting this ruling may not rely on it. A letter ruling is not equivalent to a Technical Advice Directive that generally affects a large number of taxpayers. If a taxpayer relies on this ruling and the Department discovers, upon examination, that the fact situation of the taxpayer is different in any material aspect from the facts and circumstances given in this ruling, then the ruling will not afford the taxpayer any protection. It should be noted that this document is not to be cited as precedent and that a change in statute, a regulation, or case law could void this ruling.

Should you have any questions, please contact me.

Very truly yours,
